

The benefits of probiotics for humans have been well documented, with a wide range of products available to top up the good bacteria in your gut – helping support your body's natural defences.

But did you know that your rabbit can get similar benefits from probiotics as well?

Rabbits rely on a stable mix of beneficial gut bacteria and yeasts to help digest their fibrous diet. These healthy bacteria can benefit from support, especially during times of stress, a change in diet or changes in the environment.

This is why ADM Protexin, working in partnership with practising vets and microbiologists worldwide, has developed a leading range of probiotic products to help support your rabbit's natural defences and gut health.

For further information on the Protexin range of products, just ask your vet or visit [www.protexinvet.com](http://www.protexinvet.com)

# Gastrointestinal

## For Rabbits

An owner's guide to rabbit digestive health

# Fibreplex®

## Fibreplex®

Protexin Fibreplex® is a carrot flavoured high fibre paste, formulated to support normal gut movement. Fibreplex® also contains probiotics and Preplex® prebiotics which help support the good bacteria in your rabbit's gut.

### Directions for use

Give 1ml per kg of body weight by mouth, three times a day, for as long as considered necessary or as advised by your veterinary surgeon.

# Bio-Lapis

## Bio-Lapis

Protexin Bio-Lapis is a dandelion flavoured powder containing electrolytes and vitamins to aid oral hydration, as well as probiotics and Preplex® prebiotics to support the beneficial bacteria in the gut. Bio-Lapis may be used alongside antibiotics to help stabilise the population of good bacteria.

### Directions for use

Use one sachet per day for as long as considered necessary by your veterinary surgeon. To create an isotonic solution add one sachet to 50ml of water.

It is also advisable to provide an alternative source of water alongside Bio-Lapis.

# Pro-Fibre

## Pro-Fibre

Rabbits require fibre of varied lengths in their diet; longer pieces of fibre encourage gut movement, smaller pieces of fibre are digested by microbes to provide the rabbit's nutritional needs. Protexin Pro-Fibre is a dandelion flavoured pellet containing high levels of insoluble and soluble fibre to promote efficient digestion, as well as probiotics and Preplex® prebiotics to support the population of beneficial microorganisms in the gut.

### Directions for use

Sprinkle liberally over normal food or make available *ad libitum* in a separate container, or as directed by a veterinary surgeon.
