

DASUQUIN®

i Not all ingredients are created equally

There are large variations in the quality of the ingredients used in joint supplements. The quality of an ingredient is based on its purity and ability to penetrate the joint. Chondroitin Sulphate is a large molecule and the specific size (or molecular weight) can vary depending on the origin of the ingredient and the processing technique.

The low molecular weight Chondroitin Sulphate, found in Dasuquin, has been shown to be able to penetrate the joint and effectively support joint health. Dasuquin contains the original, researched combination of Glucosamine HCl (FCHG49®) and Chondroitin Sulphate (TRH122®) which have been the subject of over 50 published studies demonstrating safety, absorption and effectiveness.

A new breed of joint supplement

i Ingredients

A new and exclusive joint health formula

- The unique joint health supplement for dogs that contains the effective compound, ASU
- An advanced combination of Glucosamine HCl, Chondroitin Sulphate, Boswellia Serrata and ASU

Supported by science

- Over 30 published and peer-reviewed studies in dogs, cats, horses and humans

Natural tasty flavour

- Proven to be palatable for dogs

Highest quality ingredients

- Avocado-Soybean Unsaponifiables (ASU)
- Glucosamine HCl – purity >99%
- Chondroitin Sulphate – purity 100%
- Enriched Boswellia Serrata extract

? What is Dasuquin?

Dasuquin is an advanced joint health supplement for dogs. Dasuquin feeds and supports the cartilage lining your dog's joints, helping them move more easily and comfortably.

? What is in Dasuquin?

Three key ingredients make Dasuquin so beneficial for your dog:

ASU – Stands for Avocado-Soybean Unsaponifiables. ASU is a specific fraction of oil that is extracted from soybeans and avocados. The major components of ASU are phytosterols which are rapidly incorporated into cells. Over 30 published studies on ASU have demonstrated the ability of this ingredient to support joint health in dogs, horses and humans.

Chondroitin Sulphate – A normal constituent of cartilage which has the ability to maintain natural cartilage metabolism and function.

Glucosamine Hydrochloride – A key component of articular cartilage.

? How is Dasuquin different?

Dasuquin is the only joint supplement available that contains the innovative new ingredient ASU along with the optimal amount of Glucosamine HCl (FCHG49®) and low molecular weight Chondroitin Sulphate (TRH122®) for your dog. This unique combination has been shown, in numerous scientific studies, to support new cartilage production.

i Directions for use

Dasuquin is available for small/medium dogs (less than 25kg) and large dogs (more than 25kg) and is available in tubs of 80 chewable tablets. Tablets can be fed whole or crumbled and mixed into food.

Initial loading programme

Feed daily for 4-6 weeks, or as recommended by your veterinary surgeon.

Maintenance programme

After the initial loading period, the number of tablets per day may be reduced by half. The maintenance level can be used long-term to support joint health.

The number of tablets can be increased at any time depending on your dog's needs.

Weight of Dog	Dasuquin Small/ Medium Breed		Dasuquin Large Breed	
	Initial loading Tablet/s per day	Maintenance Tablet/s per day	Initial loading Tablet/s per day	Maintenance Tablet/s per day
<5kg	1/2	1/2		
5-15kg	1	1/2		
15-25kg	2	1		
25-50kg			2	1
>50kg			3	1 1/2
