

Fibreplex

Fibreplex is a carrot-flavoured, high-fibre, energy-dense paste, formulated to support normal gut motility. Fibreplex also includes Protexin Biotics to support a healthy gut and microbiome.

Instructions for use

- Give 1ml/kg by mouth, 2-3 times daily for as long as considered necessary or as advised by your veterinary surgeon
- Formulated for short-term use
- Easy-to-use syringe

Bio-Lapis

Bio-Lapis is a dandelion-flavoured powder containing electrolytes and vitamins to aid oral hydration, as well as Protexin Biotics to support a healthy gut and microbiome.

Instructions for use

- Use one sachet per day for as long as considered necessary or as advised by your veterinary surgeon
- Formulated for short-term use
- To create an isotonic solution add one sachet to 50ml of water
- It is advisable to provide an alternative source of water alongside Bio-Lapis
- May be added to drinking water

Gastrointestinal for Rabbits

An owner's guide to rabbit
digestive health.

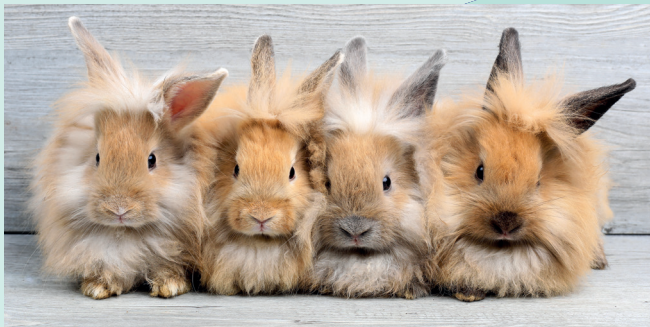

The rabbit gastrointestinal system

The benefits of probiotics and prebiotics are wide ranging and help support our body's natural defences. But did you know that your rabbit can get similar benefits from them as well?¹⁻³

Rabbits have a specialised gastrointestinal system^{4,5} which relies on a stable mix of microorganisms such as beneficial gut bacteria and yeasts to help digest their fibrous diet and also regulate many physiological processes.¹⁻³

Due to the importance of the gastrointestinal microbiome in rabbits, it is essential to support it during times of potential disturbance such as weaning, altered diet, hypomotility, stress, pain or antibiotic use.^{4,6,7}

This is why Protexin Veterinary, working in partnership with practising vets and microbiologists worldwide, has developed a leading range of products containing probiotics and prebiotics to help support your rabbit's natural defences and gut health.

Protexin® Biotics

Our Protexin Biotics have been expertly developed to support a healthy microbiome. The microbiome is essential for the normal functioning of the gastrointestinal tract and for the gut's interaction with the rest of the body. Our Protexin Biotics help support the natural balance in the animal's gut and keep them at their best.

All of our rabbit products contain both prebiotics and probiotics.

Probiotics

Probiotics are live microorganisms shown to support the microbiome.

Our rabbit products contain the probiotic *Saccharomyces cerevisiae* (CNCM I-4407) 4b1702 which is a live yeast. It is microencapsulated to allow it to reach and affect your rabbit's microbiome.⁸

Prebiotics

Prebiotics selectively feed beneficial bacteria, supporting a diverse and healthy microbiome.

In rabbits, prebiotics have been found to help maintain their health status. Short chain fatty acids produced by their breakdown provide around 30% of a rabbit's energy requirements, as well as supporting gut health and the innate immune system.^{1,7,9,10}

Preplex®

Our rabbit products contain Preplex®, a combination of prebiotics which allows our products to support the growth of beneficial bacteria throughout the colon.¹¹⁻¹³
